DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Daugherty teaches a method for an option creation for an asset that has a value that varies over time. Williams teaches a method for interactive indicators. Neither Daugherty nor Williams teach computing the probability of the value of an asset hitting the box from the front, computing the probability of the value of the asset hitting the box from the top, computing the probability of the value of an asset hitting the box from the bottom, computing the probability of the value of the asset hitting the box anywhere; and computing the price for the option by multiplying a modified probability p' times an amount of money to be paid for hitting the box, then adding a transaction fee, wherein said modified probability p' is calculated according to the formula: $p' = (1+c)p / 1+cp$, where c is a non-negative safety parameter and p is the probability of the value of the asset hitting anywhere in the box.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
